Andy Gibran López Nambo

Modern Workplace, Cloud & Security Engineer · Microsoft 365, Intune, Power Platform and automation

andy_gibran_2000@hotmail.com | Michoacán, Mexico (remote) | linkedin.com/in/agibranlopez | gibranlopez.com

Summary

Computer Systems Engineer specializing in cybersecurity. Over a year managing Microsoft 365, Intune, Entra ID and the security of 110 devices, and remote IT consultant who builds applications and automations on Microsoft 365, Power Platform and QuickBooks. I document what I deliver and I'm looking to join a consulting team working with Microsoft 365 and Azure.

Experience

IT and Cloud Solutions Consultant · JC Millwork — Jan 2026 – Present · Remote

- Built a web estimating application for millwork, connected to QuickBooks and Microsoft 365: it gives cost visibility across about 295 jobs, sends estimates, and reduced operating costs and hiring for estimating.
- Automated payroll for about 12 people and job reminder emails; the app works on mobile, avoiding a separate mobile app.
- With Power Automate and Power Apps, built an app to upload photo evidence, email flows, and a flow that creates each job's folder when it is added to a SharePoint list.
- Migrated 10 mailboxes from Google Workspace to Microsoft 365 and redesigned the website (from Wix to Astro with Lenis animations), which enabled the app; provide remote support.

Modern Workplace, Cloud & Security Engineer · Harinas Guadalupe — Aug 2025 – Oct 2026

- Cut new-device setup from about 2 days per PC to 3 PCs in 1 hour by standardizing 110 devices with Entra ID, Intune and Autopilot.
- Standardized the 110 devices with Intune policies: KFM and OneDrive backup, no local saving, hidden drives, SharePoint sync, Windows Hello biometrics where required, and 16+ apps deployed automatically.
- Automated daily patching, software inventory and remediation for 110 devices with Action1 and PowerShell, including BitLocker keys and centralizing printers in the cloud.
- Automated attendance with n8n: pulls employee hours from a Google app, converts them to .dat each pay period, and uploads them to On the Minute.
- Supported 110 to 120 users and replaced traditional antivirus with CrowdStrike Falcon (EDR) on 105 devices.
- Eliminated an RCE vulnerability with plaintext password exposure on Hikvision cameras by updating firmware.
- Closed web vulnerabilities (including SQL injection) and migrated the corporate site to Astro with CI/CD on GitHub and Cloudflare.
- Classified information with Microsoft Purview and documented procedures in GitHub.

Independent Developer — Independent

- Built ERP systems with Angular for wholesale market vendors: inventory control and accounting.

Network and Cybersecurity Specialist (professional internship) · Alebat — 2023 – 2024

- Took part in AWS security (CloudWatch, GuardDuty, WAF) and worked with S3, EC2, CloudFront and load balancers; applied ACLs and hardening.

Project Analyst · TotalPlay — 2022

- Cut reports and deliverables for fiber-optic power tests from weeks to one day by designing the tracing and automation in VBA.

Technical skills

Microsoft 365	Microsoft 365, Entra ID, Intune, Windows Autopilot, Windows Hello, BitLocker, SharePoint, OneDrive (KFM), Outlook, Purview, Power Automate, Power Apps
Automation	PowerShell, Python, VBA, n8n, Power Automate, Action1
Security	CrowdStrike Falcon (EDR), system hardening, Active Directory, ACLs, pentesting labs (TryHackMe, Hack The Box)
Cloud and development	AWS (CloudWatch, GuardDuty, WAF, S3, EC2, CloudFront), Google Workspace, Cloudflare, Vercel, Astro, Angular, Git and GitHub, QuickBooks integration
Virtualization	VMware ESXi, VMware Workstation, VirtualBox; Windows and Linux (Ubuntu) systems

Education, courses and achievements

B.Sc. in Computer Systems Engineering, cybersecurity specialization · Instituto Tecnológico de Morelia · 2018 – 2024 · Graduated

Cisco courses: Introduction to Cybersecurity (Mar 2025), Ethical Hacker (Jun 2025) · Languages: Spanish native, English B2

First place in an internal CTF and OWASP challenge with KPMG (2023), using VMware ESXi to reach the VMs over a public IP.
